

100 CSS Coding Challenges for Intern Developers

1. Apply text color using color.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Text Color</title>

  <style>
    h1{
      color: blue;
    }

    p{
      color: green;
    }
  </style>
</head>
<body>

  <h1>Welcome To CSS</h1>

  <p>This is colorful text using CSS color property.</p>

</body>
</html>
```

2. Apply background color to webpage.

```
<!DOCTYPE html>
<html lang="en"
```

```
<head>

  <title>Background Color</title>

  <style>

    body{

      background-color: lightblue;

    }

  </style>
</head>
<body>

  <h1>Background Color Example</h1>

</body>
</html>
```

3. Create gradient background.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Gradient Background</title>

  <style>

    body{

      height: 100vh;

      background: linear-gradient(to right, purple, pink);

    }

    h1{

      color: white;

      text-align: center;
```

```

padding-top: 200px;
}
</style>
</head>
<body>

<h1>Gradient Background</h1>

</body>
</html>

```

4. Change font size and font family.

```

<!DOCTYPE html>
<html lang="en">
<head>
  <title>Font Styling</title>

  <style>
    h1{
      font-size: 40px;
      font-family: Arial;
    }

    p{
      font-size: 20px;
      font-family: cursive;
    }
  </style>
</head>
<body>

  <h1>CSS Fonts</h1>

  <p>Learning font size and font family.</p>

</body>
</html>

```

5. Add border to div.

```

<!DOCTYPE html>
<html lang="en">
<head>
  <title>Border Example</title>

```

```

<style>
  div{
    border: 3px solid black;
    width: 300px;
    padding: 20px;
  }
</style>
</head>
<body>

  <div>
    This div has border.
  </div>

</body>
</html>

```

6. Create rounded button using border-radius.

```

<!DOCTYPE html>
<html lang="en">
<head>
  <title>Rounded Button</title>

  <style>
    button{
      background-color: blue;
      color: white;
      border: none;
      padding: 12px 25px;
      border-radius: 30px;
      font-size: 18px;
    }
  </style>
</head>
<body>

  <button>Click Here</button>

</body>
</html>

```

7. Apply padding to container.

```

<!DOCTYPE html>
<html lang="en">
<head>
  <title>Padding Example</title>

  <style>
    .container{
      background-color: lightgray;

```

```

        padding: 40px;
        width: 300px;
    }
</style>
</head>
<body>

    <div class="container">
        Padding adds space inside the container.
    </div>

</body>
</html>

```

8. Apply margin between sections.

```

<!DOCTYPE html>
<html lang="en">
<head>
    <title>Margin Example</title>

    <style>
        section{
            background-color: lightpink;
            padding: 20px;
            margin-bottom: 20px;
        }
    </style>
</head>
<body>

    <section>
        First Section
    </section>

    <section>
        Second Section
    </section>

</body>
</html>

```

9. Create centered text layout.

```

<!DOCTYPE html>
<html lang="en">
<head>
    <title>Centered Text</title>

    <style>
        body{
            text-align: center;

```

```

    }
  </style>
</head>
<body>

  <h1>Centered Heading</h1>

  <p>This text is centered.</p>

</body>
</html>

```

10. Create stylish heading using multiple text properties.

```

<!DOCTYPE html>
<html lang="en">
<head>
  <title>Stylish Heading</title>

  <style>
    h1{
      color: darkblue;
      font-size: 50px;
      font-family: Georgia;
      text-align: center;
      text-transform: uppercase;
      letter-spacing: 5px;
      text-shadow: 3px 3px 5px gray;
    }
  </style>
</head>
<body>

  <h1>Stylish Heading</h1>

</body>
</html>

```

11. Use element selector for paragraphs.

```

<!DOCTYPE html>
<html lang="en">
<head>
  <title>Element Selector</title>

  <style>
    p{
      color: blue;
      font-size: 20px;
    }
  </style>
</head>

```

```
<body>

  <p>This is first paragraph.</p>

  <p>This is second paragraph.</p>

</body>
</html>
```

12. Use class selector for cards.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Class Selector</title>

  <style>
    .card{
      width: 250px;
      padding: 20px;
      background-color: lightgray;
      border-radius: 10px;
    }
  </style>
</head>
<body>

  <div class="card">
    <h2>Card Title</h2>
    <p>This is card content.</p>
  </div>

</body>
</html>
```

13. Use ID selector for header.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>ID Selector</title>

  <style>
    #header{
      background-color: black;
      color: white;
      padding: 20px;
      text-align: center;
    }
  </style>
</head>
<body>
```

```
<div id="header">
  <h1>Website Header</h1>
</div>
```

```
</body>
```

```
</html>
```

14. Use universal selector.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Universal Selector</title>
```

```
  <style>
    *{
      margin: 0;
      padding: 0;
      font-family: Arial;
    }
  </style>
```

```
</head>
```

```
<body>
```

```
  <h1>Universal Selector</h1>
```

```
  <p>Applied on all elements.</p>
```

```
</body>
```

```
</html>
```

15. Use group selector.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Group Selector</title>
```

```
  <style>
    h1, p, button{
      color: darkgreen;
      font-family: Arial;
    }
  </style>
```

```
</head>
```

```
<body>
```

```
  <h1>Group Selector</h1>
```

```
  <p>This paragraph uses group selector.</p>
```

```
<button>Click Me</button>
```

```
</body>
```

```
</html>
```

16. Use child selector.

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
<title>Child Selector</title>
```

```
<style>
```

```
div > p{
```

```
color: red;
```

```
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<div>
```

```
<p>This paragraph is child of div.</p>
```

```
</div>
```

```
<section>
```

```
<p>This paragraph is not selected.</p>
```

```
</section>
```

```
</body>
```

```
</html>
```

17. Use descendant selector.

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
<title>Descendant Selector</title>
```

```
<style>
```

```
div p{
```

```
color: blue;
```

```
font-size: 20px;
```

```
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<div>
```

```
<section>
```

```
<p>This paragraph is inside div.</p>
```

```
</section>
```

```
</div>
```

```
</body>
```

```
</html>
```

18. Use hover selector.

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
<title>Hover Selector</title>
```

```
<style>
```

```
  button{
```

```
    background-color: blue;
```

```
    color: white;
```

```
    padding: 10px 20px;
```

```
    border: none;
```

```
  }
```

```
  button:hover{
```

```
    background-color: red;
```

```
  }
```

```
</style>
```

```
</head>
```

```
<body>
```

```
  <button>Hover Me</button>
```

```
</body>
```

```
</html>
```

19. Use focus selector on inputs.

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
<title>Focus Selector</title>
```

```
<style>
```

```

    input{
        padding: 10px;
    }

    input:focus{
        border: 3px solid blue;
        outline: none;
    }
</style>
</head>
<body>

    <input type="text" placeholder="Enter Name">

</body>
</html>

```

20. Create responsive navigation using selectors.

```

<!DOCTYPE html>
<html lang="en">
<head>
    <title>Responsive Navigation</title>

<style>
    body{
        margin: 0;
        font-family: Arial;
    }

    nav{
        background-color: black;
        padding: 15px;
    }

    nav a{
        color: white;
        text-decoration: none;
        margin-right: 20px;
        font-size: 18px;
    }

    nav a:hover{
        color: yellow;
    }

    @media(max-width:600px){

        nav a{
            display: block;

```

```

        margin: 10px 0;
    }

}
</style>
</head>
<body>

    <nav>
        <a href="#">Home</a>
        <a href="#">About</a>
        <a href="#">Services</a>
        <a href="#">Contact</a>
    </nav>

</body>
</html>

```

21. Create card using margin and padding.

```

<!DOCTYPE html>
<html lang="en">
<head>
    <title>Card Design</title>

    <style>
        .card{
            width: 300px;
            background-color: lightgray;
            padding: 20px;
            margin: 40px auto;
            border-radius: 10px;
        }
    </style>
</head>
<body>

    <div class="card">
        <h2>Card Title</h2>
        <p>This card uses margin and padding.</p>
    </div>

</body>
</html>

```

22. Create profile card with border and shadow.

```

<!DOCTYPE html>
<html lang="en">
<head>
    <title>Profile Card</title>

```

```

<style>
  .profile-card{
    width: 300px;
    border: 2px solid gray;
    padding: 20px;
    margin: 50px auto;
    text-align: center;
    border-radius: 15px;
    box-shadow: 0px 0px 15px gray;
  }

  img{
    border-radius: 50%;
  }
</style>
</head>
<body>

  <div class="profile-card">

    

    <h2>Komal</h2>

    <p>Frontend Developer</p>

  </div>

</body>
</html>

```

23. Create product card UI.

```

<!DOCTYPE html>
<html lang="en">
<head>
  <title>Product Card</title>

  <style>
    .product-card{
      width: 250px;
      border: 1px solid lightgray;
      padding: 20px;
      text-align: center;
      border-radius: 10px;
      box-shadow: 0px 0px 10px lightgray;
      margin: 50px auto;
    }

    button{

```

```

        background-color: blue;
        color: white;
        border: none;
        padding: 10px 20px;
        border-radius: 5px;
    }
</style>
</head>
<body>

    <div class="product-card">

        

        <h2>Smart Watch</h2>

        <p>Price: ₹1999</p>

        <button>Buy Now</button>

    </div>

</body>
</html>

```

24. Create notification box.

```

<!DOCTYPE html>
<html lang="en">
<head>
    <title>Notification Box</title>

    <style>
        .notification{
            width: 350px;
            background-color: lightyellow;
            border-left: 6px solid orange;
            padding: 20px;
            margin: 40px auto;
            font-family: Arial;
        }
    </style>
</head>
<body>

    <div class="notification">

        <h3>Notification</h3>

        <p>Your form submitted successfully.</p>
    </div>

```

```
</div>
```

```
</body>
```

```
</html>
```

25. Create pricing card section.

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
  <title>Pricing Card</title>
```

```
  <style>
```

```
    .pricing-card{
```

```
      width: 300px;
```

```
      background-color: white;
```

```
      border: 1px solid lightgray;
```

```
      padding: 30px;
```

```
      margin: 50px auto;
```

```
      text-align: center;
```

```
      border-radius: 10px;
```

```
      box-shadow: 0px 0px 10px gray;
```

```
    }
```

```
    button{
```

```
      background-color: green;
```

```
      color: white;
```

```
      border: none;
```

```
      padding: 12px 25px;
```

```
      border-radius: 5px;
```

```
    }
```

```
  </style>
```

```
</head>
```

```
<body>
```

```
  <div class="pricing-card">
```

```
    <h2>Basic Plan</h2>
```

```
    <h1>₹499</h1>
```

```
    <p>1 Month Access</p>
```

```
    <button>Choose Plan</button>
```

```
  </div>
```

```
</body>
```

```
</html>
```

26. Apply box-sizing: border-box.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Pricing Card</title>

  <style>
    .pricing-card{
      width: 300px;
      background-color: white;
      border: 1px solid lightgray;
      padding: 30px;
      margin: 50px auto;
      text-align: center;
      border-radius: 10px;
      box-shadow: 0px 0px 10px gray;
    }

    button{
      background-color: green;
      color: white;
      border: none;
      padding: 12px 25px;
      border-radius: 5px;
    }
  </style>
</head>
<body>

  <div class="pricing-card">

    <h2>Basic Plan</h2>

    <h1>₹499</h1>

    <p>1 Month Access</p>

    <button>Choose Plan</button>

  </div>

</body>
</html>
```

27. Create equal width boxes.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Equal Width Boxes</title>
```

```

<style>
  .container{
    display: flex;
  }

  .box{
    flex: 1;
    background-color: lightpink;
    margin: 10px;
    padding: 30px;
    text-align: center;
  }
</style>
</head>
<body>

  <div class="container">

    <div class="box">Box 1</div>

    <div class="box">Box 2</div>

    <div class="box">Box 3</div>

  </div>

</body>
</html>

```

28. Create dashboard widgets.

```

<!DOCTYPE html>
<html lang="en">
<head>
  <title>Dashboard Widgets</title>

  <style>
    .dashboard{
      display: flex;
      gap: 20px;
      padding: 20px;
    }

    .widget{
      flex: 1;
      background-color: lightgray;
      padding: 30px;
      border-radius: 10px;
      text-align: center;
    }
  </style>

```

```

        box-shadow: 0px 0px 10px gray;
    }
</style>
</head>
<body>

    <div class="dashboard">

        <div class="widget">
            <h2>Users</h2>
            <p>1500</p>
        </div>

        <div class="widget">
            <h2>Sales</h2>
            <p>₹50K</p>
        </div>

        <div class="widget">
            <h2>Orders</h2>
            <p>320</p>
        </div>

    </div>

</body>
</html>

```

29. Create spacing utility system.

```

<!DOCTYPE html>
<html lang="en">
<head>
    <title>Spacing Utility</title>

    <style>
        .p-20{
            padding: 20px;
        }

        .m-20{
            margin: 20px;
        }

        .bg{
            background-color: lightgreen;
        }
    </style>
</head>
<body>

```

```
<div class="p-20 m-20 bg">
  Spacing Utility Classes Example
</div>
```

```
</body>
```

```
</html>
```

30. Create responsive content container.

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
  <title>Responsive Container</title>
```

```
  <style>
```

```
    .container{
      width: 80%;
      max-width: 1000px;
      margin: auto;
      background-color: lightgray;
      padding: 20px;
    }
  
```

```
  @media(max-width:600px){
```

```
    .container{
      width: 95%;
    }
  
```

```
  }
</style>
```

```
</head>
```

```
<body>
```

```
  <div class="container">
```

```
    <h1>Responsive Container</h1>
```

```
    <p>This container adjusts according to screen size.</p>
```

```
  </div>
```

```
</body>
```

```
</html>
```

31. Create blog typography.

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
  <title>Blog Typography</title>
```

```

<style>
  body{
    font-family: Georgia;
    line-height: 1.8;
    padding: 40px;
  }

  h1{
    font-size: 42px;
  }

  p{
    font-size: 20px;
    color: #444;
  }
</style>
</head>
<body>

  <h1>My Blog Post</h1>

  <p>
    This is an example of blog typography using readable fonts and spacing.
  </p>

</body>
</html>

```

32. Apply line-height properly.

```

<!DOCTYPE html>
<html lang="en">
<head>
  <title>Line Height</title>

  <style>
    p{
      font-size: 20px;
      line-height: 2;
    }
  </style>
</head>
<body>

  <p>
    Line height improves readability by creating proper spacing between lines of text.
    CSS typography becomes more user friendly with good spacing.
  </p>

```

```
</body>
```

```
</html>
```

33. Use letter-spacing in headings.

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
  <title>Letter Spacing</title>
```

```
  <style>
```

```
    h1{
```

```
      letter-spacing: 8px;
```

```
      text-transform: uppercase;
```

```
      color: darkblue;
```

```
    }
```

```
  </style>
```

```
</head>
```

```
<body>
```

```
  <h1>CSS Heading</h1>
```

```
</body>
```

```
</html>
```

34. Create stylish quote section.

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
  <title>Quote Section</title>
```

```
  <style>
```

```
    .quote{
```

```
      background-color: black;
```

```
      color: white;
```

```
      padding: 40px;
```

```
      text-align: center;
```

```
      font-size: 28px;
```

```
      font-style: italic;
```

```
      border-left: 8px solid yellow;
```

```
    }
```

```
  </style>
```

```
</head>
```

```
<body>
```

```
<div class="quote">
```

```
"Success is not final, failure is not fatal."
```

```
</div>
```

```
</body>
```

```
</html>
```

35. Create newspaper text layout.

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
<title>Newspaper Layout</title>
```

```
<style>
```

```
.news{
```

```
column-count: 3;
```

```
column-gap: 30px;
```

```
font-size: 18px;
```

```
line-height: 1.8;
```

```
padding: 20px;
```

```
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<div class="news">
```

```
    Lorem ipsum dolor sit amet, consectetur adipisicing elit.
```

```
    Accusantium, modi. Lorem ipsum dolor sit amet consectetur adipisicing elit.
```

```
    Lorem ipsum dolor sit amet consectetur adipisicing elit.
```

```
</div>
```

```
</body>
```

```
</html>
```

36. Create uppercase navigation menu.

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```

<head>
  <title>Uppercase Navigation</title>

  <style>
    nav{
      background-color: black;
      padding: 15px;
    }

    nav a{
      color: white;
      text-decoration: none;
      margin-right: 20px;
      text-transform: uppercase;
      font-size: 18px;
    }
  </style>
</head>
<body>

  <nav>

    <a href="#">Home</a>

    <a href="#">About</a>

    <a href="#">Services</a>

    <a href="#">Contact</a>

  </nav>

</body>
</html>

```

37. Create responsive heading system.

```

<!DOCTYPE html>
<html lang="en">
<head>
  <title>Responsive Heading</title>

  <style>
    h1{
      font-size: 60px;
      text-align: center;
    }

    @media(max-width:600px){

```

```

        h1{
            font-size: 35px;
        }

    }
</style>
</head>
<body>

    <h1>Responsive Heading</h1>

</body>
</html>

```

38. Create portfolio typography.

```

<!DOCTYPE html>
<html lang="en">
<head>
    <title>Portfolio Typography</title>

    <style>
        body{
            font-family: Arial;
            background-color: #f4f4f4;
            text-align: center;
            padding: 50px;
        }

        h1{
            font-size: 50px;
            color: darkblue;
        }

        p{
            font-size: 22px;
            color: gray;
        }
    </style>
</head>
<body>

    <h1>Komal Khandave</h1>

    <p>Frontend Developer & Designer</p>

</body>
</html>

```

39. Create SaaS landing page typography.

```

<!DOCTYPE html>

```

```

<html lang="en">
<head>
  <title>SaaS Typography</title>

  <style>
    body{
      font-family: Verdana;
      text-align: center;
      padding: 60px;
      background-color: #eef2ff;
    }

    h1{
      font-size: 55px;
      color: #222;
    }

    p{
      font-size: 22px;
      color: #555;
      max-width: 700px;
      margin: auto;
    }
  </style>
</head>
<body>

  <h1>Grow Your Business Faster</h1>

  <p>
    Modern SaaS platform to manage projects, teams and productivity.
  </p>

</body>
</html>

```

40. Create readable article structure.

```

<!DOCTYPE html>
<html lang="en">
<head>
  <title>Readable Article</title>

  <style>
    body{
      font-family: Georgia;
      line-height: 1.8;
      background-color: #f9f9f9;
    }

```

```

    article{
        max-width: 800px;
        margin: 40px auto;
        background-color: white;
        padding: 30px;
    }

    h1{
        font-size: 42px;
    }

    p{
        font-size: 20px;
        color: #444;
    }
</style>
</head>
<body>

    <article>

        <h1>Importance of CSS</h1>

        <p>
            CSS helps developers create beautiful and responsive websites with better user
            experience.
        </p>

    </article>

</body>
</html>

```

41. Apply background image.

```

<!DOCTYPE html>
<html lang="en">
<head>
    <title>Background Image</title>

    <style>
        body{
            background-image: url("bg.jpg");
            background-size: cover;
            background-repeat: no-repeat;
        }

        h1{
            color: white;
            text-align: center;

```

```

        padding-top: 200px;
    }
</style>
</head>
<body>

    <h1>Background Image Example</h1>

</body>
</html>

```

42. Create full-screen hero section.

```

<!DOCTYPE html>
<html lang="en">
<head>
    <title>Hero Section</title>

    <style>
        .hero{
            height: 100vh;
            background-color: darkblue;
            color: white;
            text-align: center;
            padding-top: 250px;
        }

        h1{
            font-size: 60px;
        }
    </style>
</head>
<body>

    <section class="hero">

        <h1>Welcome To My Website</h1>

        <p>Create Modern Websites with CSS</p>

    </section>

</body>
</html>

```

43. Apply background-size:cover.

```

<!DOCTYPE html>
<html lang="en">
<head>
    <title>Background Cover</title>

```

```

<style>
  body{
    height: 100vh;
    background-image: url("nature.jpg");
    background-size: cover;
    background-position: center;
  }
</style>
</head>
<body>

</body>
</html>

```

44. Create parallax effect structure.

```

<!DOCTYPE html>
<html lang="en">
<head>
  <title>Parallax Effect</title>

  <style>
    .parallax{
      height: 100vh;
      background-image: url("mountain.jpg");
      background-attachment: fixed;
      background-size: cover;
      background-position: center;
    }

    .content{
      padding: 50px;
      text-align: center;
      font-size: 25px;
    }
  </style>
</head>
<body>

  <div class="parallax"></div>

  <div class="content">
    <p>Parallax Scrolling Effect</p>
  </div>

</body>
</html>

```

45. Create overlay background effect.

```

<!DOCTYPE html>
<html lang="en">

```

```

<head>
  <title>Overlay Effect</title>

  <style>
    .hero{
      height: 100vh;
      background-image: linear-gradient(rgba(0,0,0,0.5),
        rgba(0,0,0,0.5)), url("city.jpg");

      background-size: cover;
      color: white;
      text-align: center;
      padding-top: 250px;
    }
  </style>
</head>
<body>

  <section class="hero">

    <h1>Overlay Background</h1>

  </section>

</body>
</html>

```

46. Create dark theme layout.

```

<!DOCTYPE html>
<html lang="en">
<head>
  <title>Dark Theme</title>

  <style>
    body{
      background-color: #121212;
      color: white;
      font-family: Arial;
      padding: 40px;
    }

    .card{
      background-color: #1e1e1e;
      padding: 30px;
      border-radius: 10px;
    }
  </style>
</head>
<body>

```

```
<div class="card">

  <h1>Dark Theme Layout</h1>

  <p>Modern dark UI design using CSS.</p>

</div>

</body>
</html>
```

47. Create glassmorphism effect.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Glassmorphism</title>

  <style>
    body{
      height: 100vh;
      display: flex;
      justify-content: center;
      align-items: center;
      background: linear-gradient(to right, purple, pink);
    }

    .glass{
      width: 300px;
      padding: 30px;
      background: rgba(255,255,255,0.2);
      border-radius: 20px;
      backdrop-filter: blur(10px);
      color: white;
      text-align: center;
    }
  </style>
</head>
<body>

  <div class="glass">

    <h1>Glass UI</h1>

    <p>Glassmorphism Effect</p>

  </div>

</body>
```

```
</html>
```

48. Create neumorphism UI card.

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
<title>Neumorphism Card</title>
```

```
<style>
```

```
body{
```

```
background-color: #e0e0e0;
```

```
display: flex;
```

```
justify-content: center;
```

```
align-items: center;
```

```
height: 100vh;
```

```
}
```

```
.card{
```

```
width: 300px;
```

```
padding: 40px;
```

```
border-radius: 20px;
```

```
background-color: #e0e0e0;
```

```
box-shadow: 10px 10px 20px #bebebe,
```

```
-10px -10px 20px #ffffff;
```

```
text-align: center;
```

```
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<div class="card">
```

```
<h1>Neumorphism</h1>
```

```
</div>
```

```
</body>
```

```
</html>
```

49. Create animated gradient background

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
<title>Animated Gradient</title>
```

```
<style>
```

```
body{
```

```
height: 100vh;
```

```
background: linear-gradient(45deg, red, blue, purple);
```

```
background-size: 400% 400%;
```

```

        animation: gradient 8s infinite;
    }

    @keyframes gradient{

        0%{
            background-position: 0% 50%;
        }

        50%{
            background-position: 100% 50%;
        }

        100%{
            background-position: 0% 50%;
        }

    }
</style>
</head>
<body>

</body>
</html>

```

50. Create OTT-style background section.

```

<!DOCTYPE html>
<html lang="en">
<head>
    <title>OTT Background</title>

    <style>
        .ott-section{
            height: 100vh;
            background-image: linear-gradient(rgba(0,0,0,0.7),
            rgba(0,0,0,0.7)), url("movie.jpg");

            background-size: cover;
            background-position: center;
            color: white;
            text-align: center;
            padding-top: 250px;
        }

        h1{
            font-size: 60px;
        }

        button{

```

```

        background-color: red;
        color: white;
        border: none;
        padding: 15px 30px;
        font-size: 20px;
        border-radius: 5px;
    }
</style>
</head>
<body>

    <section class="ott-section">

        <h1>Unlimited Movies & Shows</h1>

        <button>Watch Now</button>

    </section>

</body>
</html>

```

51. Create horizontal navbar using flexbox.

```

<!DOCTYPE html>
<html lang="en">
<head>
    <title>Flexbox Navbar</title>

    <style>
        nav{
            display: flex;
            background-color: black;
            padding: 15px;
        }

        nav a{
            color: white;
            text-decoration: none;
            margin-right: 20px;
            font-size: 18px;
        }
    </style>
</head>
<body>

    <nav>

        <a href="#">Home</a>

```

```

    <a href="#">About</a>

    <a href="#">Services</a>

    <a href="#">Contact</a>

</nav>

</body>
</html>

```

52. Center content using flexbox.

```

<!DOCTYPE html>
<html lang="en">
<head>
  <title>Center Content</title>

  <style>
    body{
      height: 100vh;
      display: flex;
      justify-content: center;
      align-items: center;
    }

    .box{
      width: 300px;
      height: 200px;
      background-color: lightblue;
      display: flex;
      justify-content: center;
      align-items: center;
      font-size: 25px;
    }
  </style>
</head>
<body>

  <div class="box">

    Center Content

  </div>

</body>
</html>

```

53. Create responsive card layout.

```

<!DOCTYPE html>
<html lang="en">

```

```

<head>
  <title>Responsive Cards</title>

  <style>
    .container{
      display: flex;
      gap: 20px;
      flex-wrap: wrap;
      padding: 20px;
    }

    .card{
      flex: 1 1 250px;
      background-color: lightgray;
      padding: 20px;
      border-radius: 10px;
    }
  </style>
</head>
<body>

  <div class="container">

    <div class="card">
      <h2>Card 1</h2>
    </div>

    <div class="card">
      <h2>Card 2</h2>
    </div>

    <div class="card">
      <h2>Card 3</h2>
    </div>

  </div>

</body>
</html>

```

54. Create pricing cards section.

```

<!DOCTYPE html>
<html lang="en">
<head>
  <title>Pricing Cards</title>

  <style>
    .pricing{
      display: flex;

```

```

        gap: 20px;
        justify-content: center;
        padding: 40px;
    }

    .card{
        width: 250px;
        padding: 30px;
        background-color: white;
        text-align: center;
        border-radius: 10px;
        box-shadow: 0px 0px 10px gray;
    }

    button{
        background-color: blue;
        color: white;
        border: none;
        padding: 10px 20px;
        border-radius: 5px;
    }
</style>
</head>
<body>

```

```

<section class="pricing">

```

```

    <div class="card">
        <h2>Basic</h2>
        <h1>₹499</h1>
        <button>Buy</button>
    </div>

```

```

    <div class="card">
        <h2>Premium</h2>
        <h1>₹999</h1>
        <button>Buy</button>
    </div>

```

```

</section>

```

```

</body>
</html>

```

55. Create sidebar dashboard.

```

<!DOCTYPE html>
<html lang="en">
<head>
    <title>Sidebar Dashboard</title>

```

```
<style>
  body{
    margin: 0;
    display: flex;
    font-family: Arial;
  }

  .sidebar{
    width: 220px;
    height: 100vh;
    background-color: black;
    color: white;
    padding: 20px;
  }

  .sidebar a{
    display: block;
    color: white;
    text-decoration: none;
    margin: 20px 0;
  }

  .content{
    padding: 30px;
  }
</style>
</head>
<body>

  <div class="sidebar">

    <h2>Dashboard</h2>

    <a href="#">Home</a>

    <a href="#">Analytics</a>

    <a href="#">Settings</a>

  </div>

  <div class="content">

    <h1>Welcome User</h1>

  </div>
```

```
</body>
```

```
</html>
```

56. Create team member section.

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
  <title>Team Section</title>
```

```
  <style>
```

```
    .team{
```

```
      display: flex;
```

```
      gap: 20px;
```

```
      justify-content: center;
```

```
      padding: 40px;
```

```
    }
```

```
    .member{
```

```
      width: 250px;
```

```
      text-align: center;
```

```
      padding: 20px;
```

```
      background-color: lightgray;
```

```
      border-radius: 10px;
```

```
    }
```

```
    img{
```

```
      border-radius: 50%;
```

```
    }
```

```
  </style>
```

```
</head>
```

```
<body>
```

```
  <section class="team">
```

```
    <div class="member">
```

```
      
```

```
      <h2>Komal</h2>
```

```
      <p>Frontend Developer</p>
```

```
    </div>
```

```
    <div class="member">
```

```
      
```

```
      <h2>Rahul</h2>
```

```
<p>UI Designer</p>
```

```
</div>
```

```
</section>
```

```
</body>
```

```
</html>
```

57. Create image gallery using flexbox.

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
<title>Image Gallery</title>
```

```
<style>
```

```
.gallery{
```

```
  display: flex;
```

```
  gap: 20px;
```

```
  flex-wrap: wrap;
```

```
  justify-content: center;
```

```
  padding: 20px;
```

```
}
```

```
.gallery img{
```

```
  width: 300px;
```

```
  border-radius: 10px;
```

```
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<div class="gallery">
```

```

```

```

```

```

```

```
</div>
```

```
</body>
```

```
</html>
```

58. Create responsive footer.

```
<!DOCTYPE html>
```

```

    <div class="blog-card">

      <h2>Blog Title 2</h2>

      <p>Another blog content example.</p>

    </div>

  </div>

</body>
</html>

```

65. Create dashboard widgets grid.

```

<!DOCTYPE html>
<html lang="en">
<head>

```

```

<title>Widgets Grid</title>

<style>
  .dashboard{
    display: grid;
    grid-template-columns: repeat(3,1fr);
    gap: 20px;
    padding: 20px;
  }

  .widget{
    background-color: lightgray;
    padding: 30px;
    text-align: center;
    border-radius: 10px;
  }
</style>
</head>
<body>

  <div class="dashboard">

    <div class="widget">
      <h2>Users</h2>
    </div>

    <div class="widget">
      <h2>Orders</h2>
    </div>

    <div class="widget">
      <h2>Revenue</h2>
    </div>

  </div>

</body>
</html>

```

66. Create portfolio project section.

```

<!DOCTYPE html>
<html lang="en">
<head>
  <title>Portfolio Projects</title>

  <style>
    .projects{
      display: grid;
      grid-template-columns: repeat(auto-fit, minmax(300px,1fr));

```

```

        gap: 20px;
        padding: 20px;
    }

    .project-card{
        background-color: #f5f5f5;
        padding: 20px;
        border-radius: 10px;
        text-align: center;
    }
</style>
</head>
<body>

<section class="projects">

    <div class="project-card">

        <h2>E-Commerce Website</h2>

        <p>Frontend project using HTML & CSS.</p>

    </div>

    <div class="project-card">

        <h2>Portfolio Website</h2>

        <p>Responsive portfolio design.</p>

    </div>

</section>

</body>
</html>

```

67. Create responsive news portal.

```

<!DOCTYPE html>
<html lang="en">
<head>
    <title>News Portal</title>

    <style>
        .news-container{
            display: grid;
            grid-template-columns: 2fr 1fr;
            gap: 20px;
            padding: 20px;

```

```

    }

    .main-news{
        background-color: lightblue;
        padding: 30px;
    }

    .side-news{
        background-color: lightgray;
        padding: 30px;
    }

    @media(max-width:700px){

        .news-container{
            grid-template-columns: 1fr;
        }

    }
</style>
</head>
<body>

```

```

<div class="news-container">

    <div class="main-news">

        <h1>Breaking News</h1>

    </div>

    <div class="side-news">

        <h2>Trending News</h2>

    </div>

</div>

```

```

</body>
</html>

```

68. Create responsive services section.

```

<!DOCTYPE html>
<html lang="en">
<head>
    <title>Services Section</title>

    <style>

```

```

.services{
  display: grid;
  grid-template-columns: repeat(auto-fit, minmax(250px,1fr));
  gap: 20px;
  padding: 20px;
}

.service-card{
  background-color: #f4f4f4;
  padding: 30px;
  text-align: center;
  border-radius: 10px;
}
</style>
</head>
<body>

```

```

<section class="services">

  <div class="service-card">

    <h2>Web Design</h2>

  </div>

  <div class="service-card">

    <h2>SEO</h2>

  </div>

  <div class="service-card">

    <h2>Marketing</h2>

  </div>

</section>

```

```

</body>
</html>

```

69. Create CSS grid-based landing page.

```

<!DOCTYPE html>
<html lang="en">
<head>
  <title>Landing Page Grid</title>

  <style>

```

```

.container{
  display: grid;
  grid-template-areas:
    "header header"
    "sidebar content"
    "footer footer";

  grid-template-columns: 250px 1fr;
  gap: 10px;
  height: 100vh;
}

header{
  grid-area: header;
  background-color: black;
  color: white;
  padding: 20px;
}

aside{
  grid-area: sidebar;
  background-color: lightgray;
  padding: 20px;
}

main{
  grid-area: content;
  background-color: lightblue;
  padding: 20px;
}

footer{
  grid-area: footer;
  background-color: black;
  color: white;
  padding: 20px;
  text-align: center;
}
</style>
</head>
<body>

<div class="container">

  <header>
    Header
  </header>

```

```
<aside>
  Sidebar
</aside>

<main>
  Main Content
</main>

<footer>
  Footer
</footer>

</div>

</body>
</html>
```

70. Create advanced responsive grid system.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Advanced Grid</title>

  <style>
    .grid-system{
      display: grid;
      grid-template-columns: repeat(auto-fit, minmax(200px,1fr));
      gap: 20px;
      padding: 20px;
    }

    .box{
      background-color: lightgreen;
      padding: 40px;
      text-align: center;
      border-radius: 10px;
      font-size: 22px;
    }
  </style>
</head>
<body>

  <div class="grid-system">

    <div class="box">1</div>

    <div class="box">2</div>

    <div class="box">3</div>
```

```
<div class="box">4</div>

<div class="box">5</div>

<div class="box">6</div>

</div>

</body>
</html>
```

71. Use relative positioning.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Relative Position</title>

  <style>
    .box{
      width: 250px;
      height: 150px;
      background-color: lightblue;
      position: relative;
      left: 50px;
      top: 30px;
      padding: 20px;
    }
  </style>
</head>
<body>

  <div class="box">

    Relative Position Example

  </div>

</body>
</html>
```

72. Use absolute positioning.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Absolute Position</title>

  <style>
    .container{
      position: relative;
```

```

        width: 500px;
        height: 300px;
        background-color: lightgray;
    }

    .box{
        position: absolute;
        top: 50px;
        left: 100px;
        width: 200px;
        height: 100px;
        background-color: coral;
        text-align: center;
        line-height: 100px;
    }
</style>
</head>
<body>

    <div class="container">

        <div class="box">
            Absolute Box
        </div>

    </div>

</body>
</html>

```

73. Create fixed navbar.

```

<!DOCTYPE html>
<html lang="en">
<head>
    <title>Fixed Navbar</title>

    <style>
        body{
            margin: 0;
            padding-top: 70px;
        }

        nav{
            position: fixed;
            top: 0;
            width: 100%;
            background-color: black;
            padding: 20px;
        }
    </style>

```

```

        nav a{
            color: white;
            text-decoration: none;
            margin-right: 20px;
        }
    </style>
</head>
<body>

    <nav>

        <a href="#">Home</a>

        <a href="#">About</a>

        <a href="#">Contact</a>

    </nav>

    <h1>Fixed Navbar Example</h1>

</body>
</html>

```

74. Create sticky header.

```

<!DOCTYPE html>
<html lang="en">
<head>
    <title>Sticky Header</title>

    <style>
        body{
            margin: 0;
        }

        header{
            position: sticky;
            top: 0;
            background-color: darkblue;
            color: white;
            padding: 20px;
        }

        .content{
            height: 1500px;
            padding: 20px;
        }
    </style>

```

```
</head>
<body>

  <header>

    Sticky Header

  </header>

  <div class="content">

    Scroll Down To See Sticky Effect

  </div>

</body>
</html>
```

75. Create floating action button.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Floating Button</title>

  <style>
    .fab{
      position: fixed;
      right: 30px;
      bottom: 30px;
      width: 60px;
      height: 60px;
      background-color: red;
      color: white;
      border-radius: 50%;
      border: none;
      font-size: 30px;
    }
  </style>
</head>
<body>

  <button class="fab">

    +

  </button>

</body>
</html>
```

76. Create notification popup.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Notification Popup</title>

  <style>
    .popup{
      position: fixed;
      top: 20px;
      right: 20px;
      background-color: green;
      color: white;
      padding: 20px;
      border-radius: 10px;
    }
  </style>
</head>
<body>

  <div class="popup">

    Login Successful

  </div>

</body>
</html>
```

77. Create image badge using position.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Image Badge</title>

  <style>
    .image-box{
      position: relative;
      width: 300px;
    }

    .image-box img{
      width: 100%;
    }

    .badge{
      position: absolute;
      top: 10px;
      right: 10px;
```

```

        background-color: red;
        color: white;
        padding: 8px 12px;
        border-radius: 20px;
    }
</style>
</head>
<body>

    <div class="image-box">

        

        <div class="badge">

            Sale

        </div>

    </div>

</body>
</html>

```

78. Create overlay text on image.

```

<!DOCTYPE html>
<html lang="en">
<head>
    <title>Overlay Text</title>

    <style>
        .container{
            position: relative;
            width: 500px;
        }

        .container img{
            width: 100%;
        }

        .text{
            position: absolute;
            bottom: 20px;
            left: 20px;
            color: white;
            font-size: 30px;
        }
    </style>
</head>

```

```
<body>

  <div class="container">

    

    <div class="text">

      Beautiful Nature

    </div>

  </div>

</body>
</html>
```

79. Create modal popup layout.

```
<!DOCTYPE html>

    body{
      margin: 0;
      background-color: rgba(0,0,0,0.5);
    }

    .modal{
      width: 400px;
      background-color: white;
      padding: 30px;
      border-radius: 10px;
      margin: 100px auto;
      text-align: center;
    }
  </style>
</head>
<body>

  <div class="modal">

    <h2>Modal Title</h2>

    <p>This is modal popup layout.</p>

    <button>Close</button>
```

```
</div>
```

```
</body>
```

```
</html>
```

80. Create layered dashboard widgets.

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
<title>Layered Widgets</title>
```

```
<style>
```

```
.dashboard{  
  display: flex;  
  gap: 20px;  
  padding: 40px;  
}
```

```
.widget{  
  position: relative;  
  width: 250px;  
  padding: 30px;  
  background-color: lightblue;  
  border-radius: 10px;  
}
```

```
.widget::before{  
  content: "";  
  position: absolute;  
  top: -10px;  
  left: -10px;  
  width: 100%;  
  height: 100%;  
  background-color: lightgray;  
  border-radius: 10px;  
  z-index: -1;  
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<div class="dashboard">
```

```
<div class="widget">
```

```
<h2>Users</h2>
```

```
<p>1500</p>
```

```
</div>

<div class="widget">

  <h2>Orders</h2>

  <p>320</p>

</div>

</div>
```

```
</body>
</html>
```

81. Create hover button effect.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Hover Button</title>

  <style>
    button{
      background-color: blue;
      color: white;
      border: none;
      padding: 15px 30px;
      font-size: 18px;
      border-radius: 5px;
      cursor: pointer;
    }

    button:hover{
      background-color: darkblue;
    }
  </style>
</head>
<body>

  <button>

    Hover Me

  </button>

</body>
</html>
```

82. Apply smooth transition.

```
<!DOCTYPE html>
```

```

<html lang="en">
<head>
  <title>Smooth Transition</title>

  <style>
    .box{
      width: 200px;
      height: 200px;
      background-color: coral;
      transition: 0.5s;
    }

    .box:hover{
      border-radius: 50%;
      background-color: purple;
    }
  </style>
</head>
<body>

  <div class="box"></div>

</body>
</html>

```

83. Create scaling hover card.

```

<!DOCTYPE html>
<html lang="en">
<head>
  <title>Scaling Card</title>

  <style>
    .card{
      width: 300px;
      padding: 30px;
      background-color: lightgray;
      border-radius: 10px;
      transition: 0.4s;
      margin: 50px auto;
      text-align: center;
    }

    .card:hover{
      transform: scale(1.1);
    }
  </style>
</head>
<body>

```

```

<div class="card">

  <h2>Hover Card</h2>

  <p>Scale Effect on Hover</p>

</div>

</body>
</html>

```

84. Create rotating icon animation.

```

<!DOCTYPE html>
